

Description of Bug (be specific About what is not working)	Location of Bug (file, class, method, etc)	Steps to Recreate Bug and/or Test Case #	Root Cause Analysis Notes
Seats that are lotteried off to random parties are not reflected when the results are printed to the screen or the audit file. For example, if a party earns one seat via the lottery, the results would show that it earned 0 seats. Internally the lottery is happening, since it is documented in the audit file and the percentage of seats for the party that they are lotteried from reflects the lottery.	seatLottery method in CPL.cc	Run program using CPLTest4.csv	For some reason the parties firstSeats attribute does not change even though we are adding to it.
Program currently ends if the user enters in a nonexistent file.	FileParser.cc	Run the program and enter a file name that does not exist.	This was intentional for testing purposes but we did not have time to change this to the desired behavior of reprompting.
The program does not check if the day given is actually a day during the specific month given.	FileParser.cc	Run the program and enter in a day and month that are incompatible ie February 31st	We simply did not implement this error checking.
The program does not check if the year given is in the future.	FileParser.cc	Run the program and give a year that is in the future.	We simply did not implement this error checking.
